I'm a passionate Junior Web Developer who enjoys building interactive and user-friendly websites. I specialize in front-end development using React, JavaScript, HTML, and CSS, and I also have hands-on experience with Django and Python for back-end development. I'm eager to keep learning, improve my skills, and take on projects that challenge me to grow as a developer and problem-solver.

EXPERIENCE

Juscall Insurance Agency Inc. – Makati City
DIGITAL MARKETING SPECIALIST – Feb 2024

- Maintained and regularly updated company websites to ensure smooth functionality and up-to-date content.
- Performed routine website backups and implemented performance monitoring for security and reliability.
- Designed and customized responsive websites using HTML, CSS, and JavaScript for better user experience and brand consistency.
- Tested website forms and interactive elements to ensure proper functionality and data submission.
- Enhanced site aesthetics and usability through modern layouts, clean coding practices, and optimization for multiple devices.

MK Attractions Philippines Inc – Angeles City
GRAPHIC DESIGN – Feb 2023

- Graphic designs, including banners, social media posts, and website visuals aligned with brand identity.

Personal Project

FULL STACK DEVELOPER/FRONT END DEVELOPER – 2025

- Full Stack Web Developer / Front-End Developer
- Personal Projects | 2024 – Present
- Built and deployed multiple web applications, including a Ticket Support System, Weather App, and Employee Directory, using React.js, HTML, CSS, and JavaScript.
- Developed the Ticket Support System with Django (Python) as the backend framework and PostgreSQL as the database for managing user tickets and support records.
- Designed modern, responsive user interfaces for seamless navigation across all devices.
- Integrated third-party APIs (e.g., weather data) and implemented CRUD operations with real-time updates.
- Applied authentication, form validation, and data management for secure and efficient functionality.
- Hosted and deployed projects on platforms such as Vercel and Hostinger, utilizing GitHub for version control.
- Focused on performance optimization, code maintainability, and UI/UX improvements for better user engagement.
